

FACTSHEET SEMPERGREEN®

PROTECTIVE COVER 300 GR/M²

MATERIAL

The protective cover is made of recycled fibers and can be applied as protection for the roofing.

APPLICABILITY

The protective cover can be installed on sloping surfaces of up to 45 degrees (depending on the system build-up) and functions as a protective layer on the roof. The protective cover has no draining function

DELIVERY AND INSTALLATION

The protective cover is supplied per m².

The protective cover must be installed first on the roof underneath the rest of the green roof system. Make sure that the protective cover is well connected by means of an overlap of approx. 10 cm.
