

FACTSHEET SEMPERGREEN® SEDUM-HERB BLANKETS

MATERIAL

The Sempergreen® Sedum-herb blankets comprise four to six different species of Sedum and twenty to twenty-five different herbs. A minimum of 60% of this mix is always present in each blanket. The plants grow on a biodegradable coconut fibre mat and a special substrate developed by Sempergreen®. The blankets boast at least 95% coverage upon delivery. Sempergreen® vegetation blankets are produced in accordance with FLL guidelines.

ABOUT THE VEGETATION

The sebaceous Sedum plants are adept at storing water in their leaves and are therefore extremely suitable for varying weather conditions. A varied and colourful effect is achieved by adding a variety of flowering herbs to the Sedum plants.

INSTALLATION AND MAINTENANCE

Sempergreen® vegetation blankets are very easy to install (download the installation instructions from our website!). Sedum-herb blankets can be installed on sloping surfaces of up to 10 degrees. Their (minimum) maintenance depends on the build-up of the system (fertilise one to three times per year).

Take into account a cutting loss of 5-10%.
