

FACTSHEET SEMPERGREEN®

WATER BUFFERING FLEECE B1200

MATERIAL

The water buffering fleece B1200 is a cloth made of recycled PET and cotton.

APPLICABILITY

The water buffering fleece has a water storage capacity and is applied to protect the roofing.

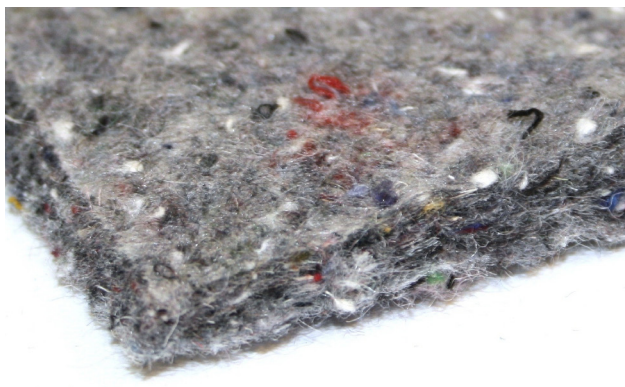

The water buffering fleece can be installed on sloping surfaces of up to 45 degrees (depending on the system build-up).

DELIVERY AND INSTALLATION

The water buffering fleece can be easily cut into the required size.

The water buffering fleece must be applied with an overlap of at least 10 cm. If the roof pitch is more than 15 degrees, we recommend using a larger overlap.
