# LIQUID

## **Technical Data Sheet** MOY 100mm Liquid Drip Trim

## **Product Description / Use:**

MOY Liquid Drip Trims are made from pultruded glass reinforced polyester (GRP), designed to provide a weatherproof roof edge finish and create a waterproof bond when used with MOY Liquid applied waterproofing systems.

The low coefficient of thermal expansion solves the ageold problem of roof leakage caused by the splitting of roofing membranes at roof edges. Despite its lightweight nature, GRP trims are strong and durable with a strengthto-weight ratio superior to aluminium and steel.

MOY Liquid Drip Trims are available in black as standard\*, they resist corrosion and the extremes of atmospheric pollution and require the minimum of maintenance.

\*Other colours may be available, contact MOY Materials for details.

#### **System Fire Testing:**

Liquid Drip Trims are used purely as detail items within MOY Liquid applied waterproofing systems.

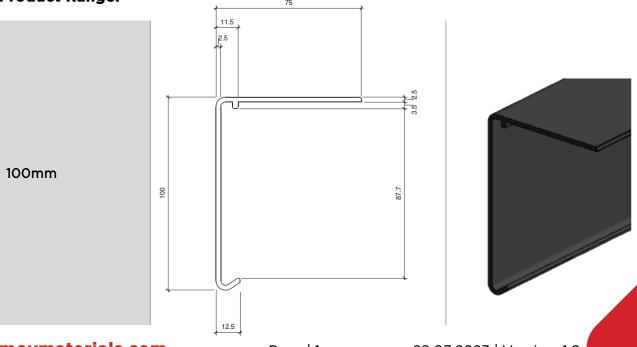

The complete roof build-up should be tested to CEN/TS 1187:2012 and classified accordingly in accordance with BS EN 13501-5 (B<sub>ROOF</sub> t1, t2, t3, t4) for the relevant country and the local building regulations, standards and codes of practice.

Trims should be fixed by means of cadmium or galvanised nails or screws at not more than 300mm centres with the ends of each length firmly secured. A minimum of 8 fixings per length is required.

Light sanding and priming of the legs are recommended to ensure good adhesion.
