FiberTite® Roofing Systems

Protecting your Operational Security

Operational security means mitigating or avoiding risk that could have an adverse effect on your people, premises, processes, products or procedures. Some systems are rated for only one or two of these factors. To protect your operational security, choose FiberTite® membranes because they provide proven performance in all these key areas.

Mission-critical facilities need to be always on, always running and always focused on health and safety. It's what's inside the building that matters — and everything inside needs to be protected. You can't control outside forces that are threatening your facility. But you can control how you mitigate risks to your operational security.

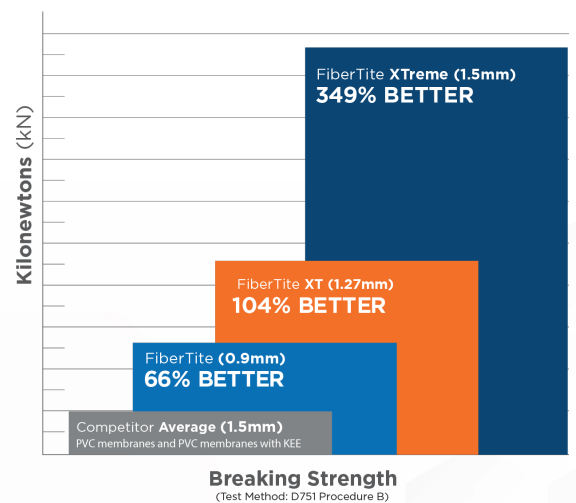

Proof of Performance

FiberTite® Roof Systems provide Confidence Without Compromise, standing up to the forces that threaten your operational security.

This is proven through:

- Superior puncture resistance
- Chemical resistance
- Superior fire performance (as measured in ASTM D6413)
- FM approved status (assemblies available upon request)
- Roof reliability for over **35+ years**

FiberTite® Roofing Systems

MOY FiberTite Roof Systems are engineered using KEE as the foundation and, when combined with the heaviest polyester fabrics in the industry, produce a high-performance roofing membrane that remains flexible and retains its physical attributes over time.

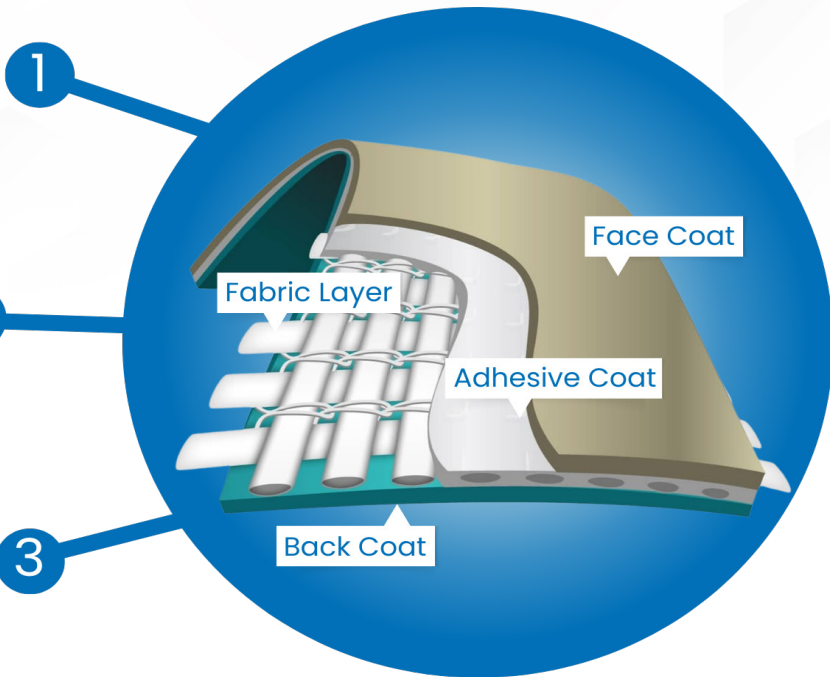

Quality Control from Start to Finish

The foundation of FiberTite comes from decades of high-performance fabric technology. The four layer technology synthesizes nearly twice as much fiber as competitors and features a unique adhesive coat and a proprietary Elvaloy KEE based formula. It combines to make FiberTite a tougher, lighter, more flexible and durable roofing membrane.

Proven fiber reinforcement packed into a "tite" pattern, creating the industry's toughest base fabric and industry-leading puncture and tear resistance.

Proven formula that includes the optimal amount of ELVALOY™ Ketone Ethylene Ester (KEE) polymer content, which makes the product flexible and resistant to chemicals and UV light.

Proven longevity in real-world applications

A formula you can trust
and a difference
you can see.

Their idea of Fiber

Our idea of Fiber

WE TAKE PRIDE IN
OUR EXCELLENT
CUSTOMER SERVICE
AND EFFICIENCY

MOY is a leading FULL SYSTEM PROVIDER of high performance rooftop waterproofing systems, Moy's systems are certified by BBA, IAB and FM Global. With bases in the UK, Ireland and Germany our innovative, long-lasting waterproofing solutions and our unparalleled technical support has earned MOY a raft of high profile clients across the globe and place it at the forefront of this dynamic and competitive industry.

Moy provides specifications tailored to each project design using innovative, long lasting waterproofing solutions. Services are far reaching across the design and specification stages of commercial projects, right through to project completion and beyond. MOY services include specialist technical support, CPD presentations, roof surveys and condition reporting and on-site support throughout the lifecycle of the project.
